"If you afraid of failure, then you don't deserved to be successful."

About Me

I think my final dream is to become a musician, make music, compose song lyrics while sipping coffee in a music studio. I currently don't have any degree but my music hobby has been around since I was 7 years old. And at that time I felt less about this kind of thing. I wanted to learn something different, and then I found something interesting, which is design. Starting from learning photo manipulation, painting design in Photoshop, at that time I studied Photoshop 6.0 and had not yet touched the creative suite version of Photoshop. At that time, until I reached the age of 13, I started to feel a little bored with the design.

Here I accepted my first job in a very new and challenging way. Because this is something that is completely different from what I have ever experienced, namely creating a site that contains simple information, is fairly simple but challenging because it is very new. Of course, I accepted and I tried the new thing (I mean seriously, how can I finish a project with zero knowledge?), And as a result, I was able and finished the project within 30 days.

While I was deep in, front-end development, I was able to combine my creativity with code, applying responsive design principles. Difficult but very satisfying. I can shape, be shaped but I keep my creativity intact.

And then, I challenge to study and deepen, back-end development, on the other hand, I also like things that have logic. I thought this was impossible for me to learn, but after trying it, learning Model View Create (MVC), learning the Create Read Update Delete (CRUD) method, trying to merge my project to make it visible on GitHub account, it's not as difficult as I thought.

So far I have C++, SQL, Javascript, HTML, CSS, Vue.js, Bootstrap, Laravel, PHP, jQuery, and also git / github. I'm also studying to React, Node.js.

It's crazy, I'm still very enthusiastic about programming technology for the future, frameworks, crazy ideas, or other principles that maybe I can integrate into the coding in my head.

Organizations

Sarjanamalam.

Founder & Chief Executive Operational

Medan, Indonesia

Jan 2020 - Present

The organization was formed at the very beginning when I continued my studies in 2018.

And I had the idea to find a solution because I found a problem in my environment. They are not focused on what they are learning, and when they want to open up business opportunities, there is no one to support them. So I took the initiative to create an organization that has a vision to help them through creating a separate platform.

Not only the platform, in the future maybe we will create an ecosystem that allows it to support all the needs of this platform.

Maybe we don't know when the platform will be released soon, but we are optimistic that the platform we designed will be able to help many people.
